The logo for IRSM features the letters 'I', 'R', and 'M' in a dark red, bold, sans-serif font. The letter 'S' is replaced by a grey road with white dashed lines, suggesting a path or infrastructure.The logo for NTRO consists of the letters 'N', 'T', 'R', and 'O' in a bold, sans-serif font. The 'N' and 'T' are blue, while the 'R' and 'O' are a teal color.

Well established 17 plus years JV **IRSM** in India

Transformation to NTRO

Is now

- 65 years experience in applied research and delivering solutions
- NTRO is a leading Australian Government owned entity
- **For purpose organisation driving outcomes for transport agencies**
- **In depth and relevant expertise**
- Focus on providing solutions
- Working across all modes – road, rail, ports and airports

Indian Road Survey & Management : IRSM

Hyderabad Office

Chennai Office

Delhi Office

- Established in the year 2009
- Technical partner and Shareholder is Australian Road Research Board
- IRSM is an ISO9001 2015 and ISO39001 certified Company
- Provides comprehensive surveys for a wide variety of clients in the World over including road condition surveys of roads and airfield pavements with technical consultancy services, training on various areas
- Having experience in Data Collection & Data Coding coverage of more than 6,50,000 lane km for Renowned Global clients

Empaneled

IRSM NTRO

Network Survey Vehicle (NSV) – Functional Assessment

Falling Weight Deflectometer (FWD) – Structural Condition

iPAVE – Functional Evaluation+ Structural continuous Deflection

T5- Friction Tester (Skid Resistance)

Retro Reflectometer (RR)

Automatic Traffic Counting and Classification (ATCC)

International Road Assessment Programme (iRAP)

Road Safety Projects

Mobile Bridge Inspection Unit (MBIU)

Axle Load Survey

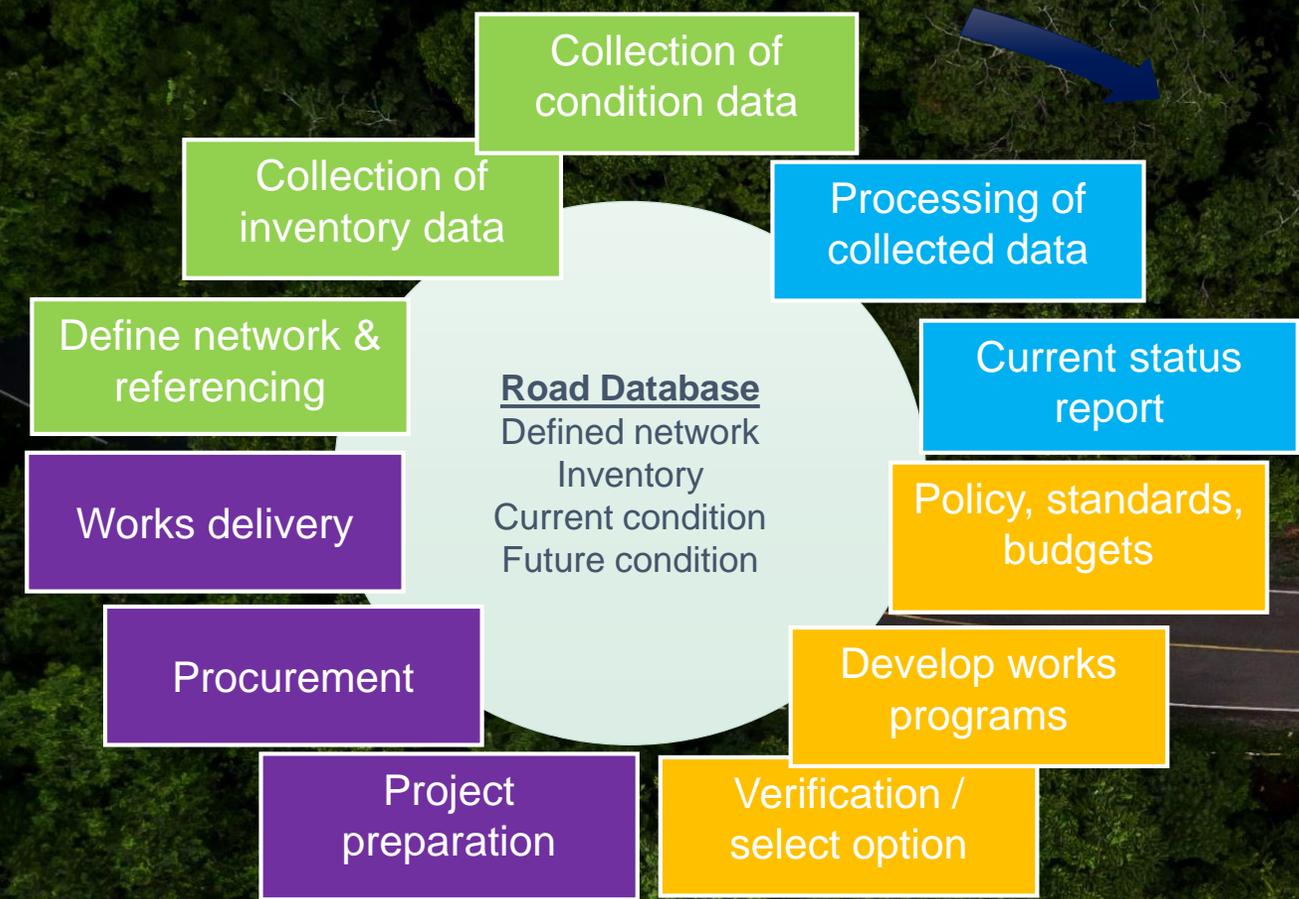

Context and Key Notes

- **Data driven intelligence and decision support systems**
- **Tool: Asset management**
- **Good Data enables to make Good decision:** Quality Data enables to Strategic Priority on key Focus Areas
- **Validation**
- **Certification**
- **Data reform**
- **Comprehensive Condition Assessment : Pavement & Inventory**
- **Road Safety Audit & Assessment**
- **Proof & Record Ensuring Data Integrity**

Laser Profiler Correlation

Supplier: CPBGGJV Report No: PR-002871-17
 Profiler: AMES 8300 High Speed Profiler
 Vehicle Registration: Vehicle Description: Toyota Prado
 Driver: Operator:

The vehicle/crew combination as described above carried out the prescribed set of correlation runs on the TNSW Roughness Calibration Sites situated between Mooney Mooney and the Somersby Interchange, north of Sydney on 28/03/2025.

These sites comprise two stretches of road covering the range of NAASRA Roughness Values from approximately 20 to 200. It also covers a range of road types from single lane winding road to full multi-lane freeway conditions.

The Supplier Laser Profiler made five (5) repeat runs and the results for each individual run were presented to NTR0, Data Analytics, for analysis. A mathematical correlation was performed on these results by comparing them individually, and as a whole, to the results obtained by the NTR0 Reference Laser Profiler as per Test Method T187, Appendix A. The results of the correlation are as follows:

Overall Correlation Slope: 1.0589
 Intercept: -4.5742
 R Squared: 0.9589
 Average % Difference: -4.2882

Internal Correlation: Run 1 R Squared: 0.965
 Run 2 R Squared: 0.986
 Run 3 R Squared: 0.985
 Run 4 R Squared: 0.993
 Run 5 R Squared: 0.991

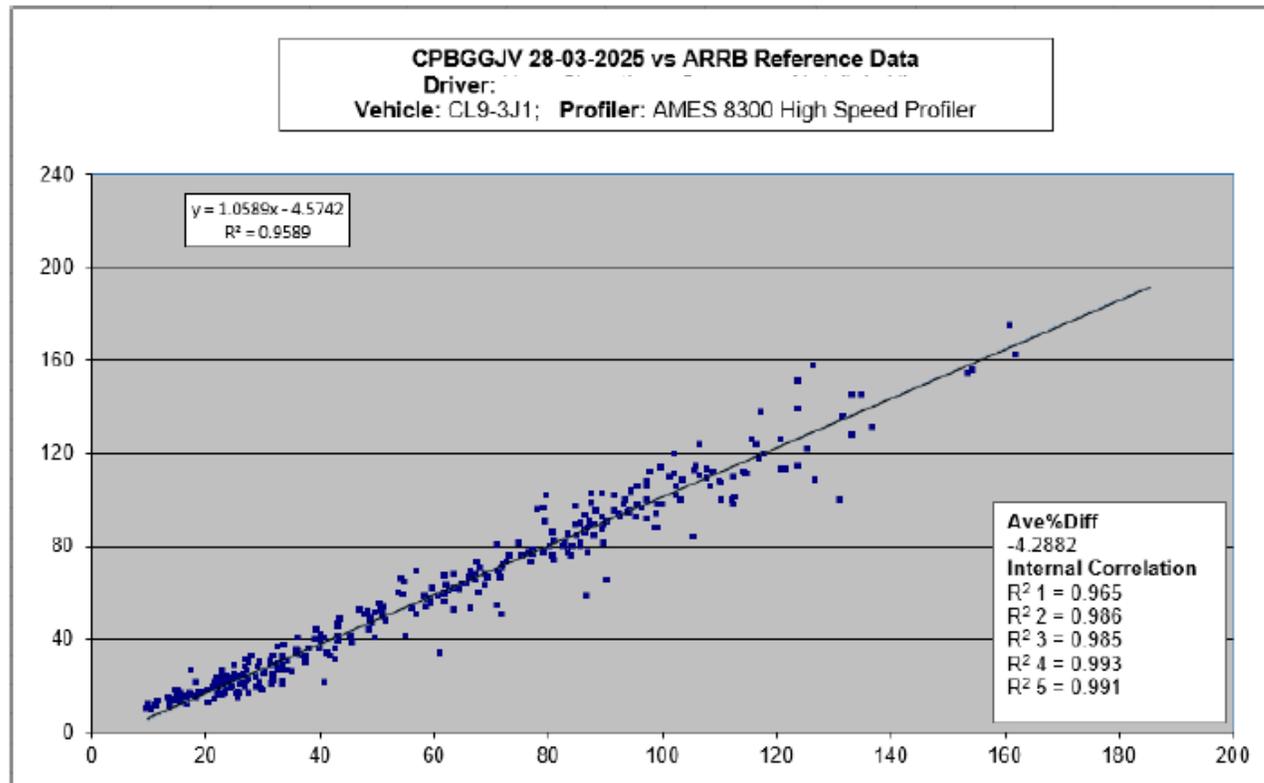

Average Speed: F3: 107.6 kph
 HW10 (Pacific Hwy): 54.5 kph

These results represent a PASS on the R Squared and Average % difference for this vehicle/crew combination. (Discrepant results, if any, are indicated by an asterisk).

The above correlation results were derived solely from the data presented by the supplier. These results may not be applicable to other combinations of drivers and/or vehicles.

APPENDIX A: Comparison to Reference Data

Collaboration : Expert Organization bringing World Class Solutions

CSIR-Central Road Research Institute (CRRI) has signed a Memorandum of Understanding (MoU) with the **National Transport Research Organization (NTRO), Australia**, to strengthen cooperation in transportation research. The partnership aims to focus on sustainable, innovative road construction, and advanced infrastructure development, enhancing technical expertise.

- Key Focus:** The MOU facilitates collaboration in the infrastructure sector and road construction technology.

- Significance:** This collaboration brings together expertise from both organizations to advance transport infrastructure projects.

- Other Collaborations:** CSIR-CRRI frequently engages in such agreements to drive innovation in road safety, traffic planning, and sustainable materials.

Right Treatment, Right Place, Right Time.

We provide data-driven, cost-effective solutions to ensure valuable maintenance dollars are spent on the right treatment, in the right place, at the right time.

NTRO SERVICES INCLUDE:

Policy

Government policy development and leadership

Planning

Road planning, freight corridor, and ESG advisory

Testing

Pavement testing for strength and deterioration

Design

Ridged and flexible pavement design

Delivery

Supporting you deliver real-world outcomes

Sustainability

Fuel transition pathways, environmental services

Automation

Digital technology and automation services

IRSM NTRO data reform

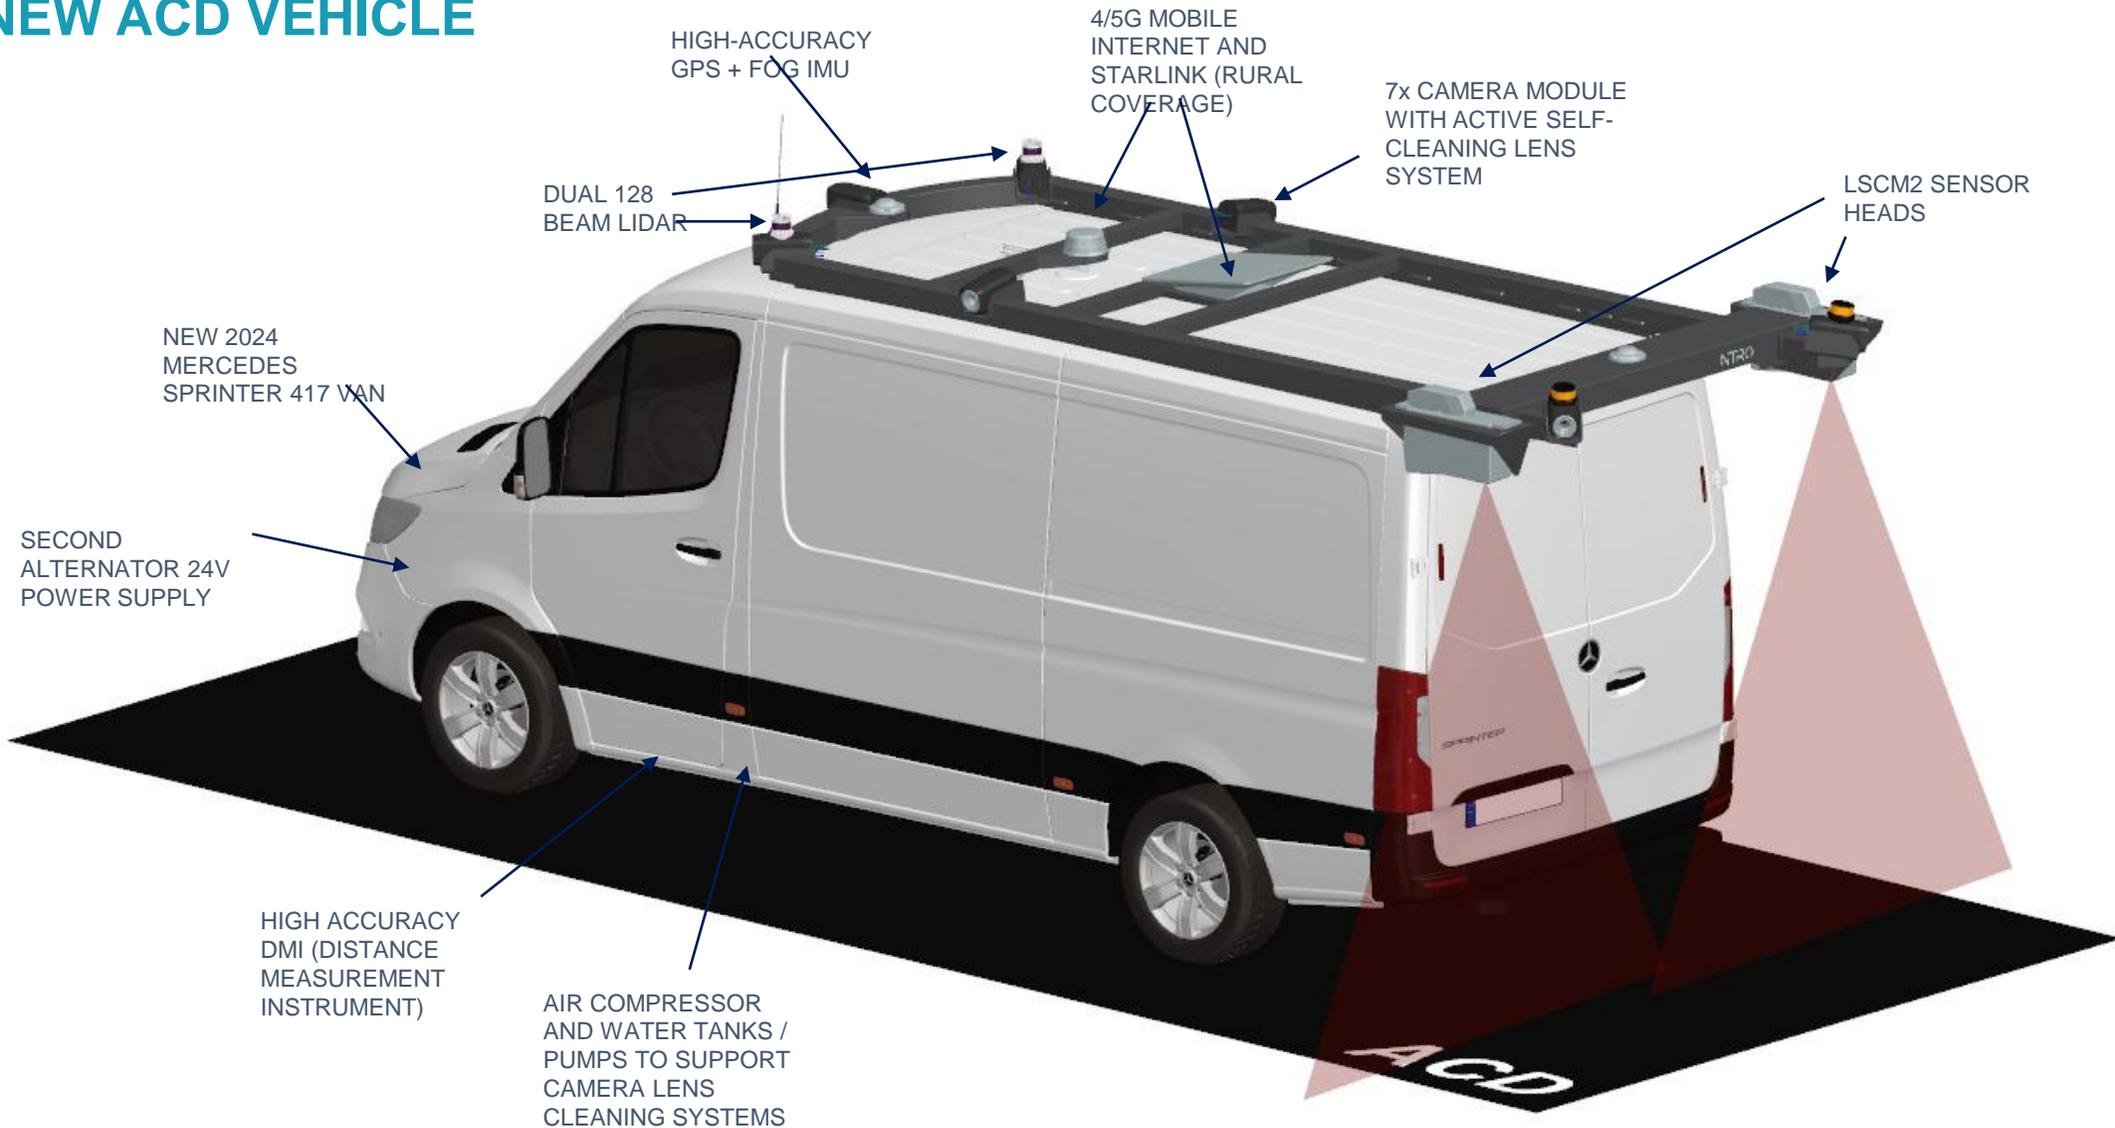

Potential areas of improvement involving data collection:

- efficient route planning (minimising collection time)
- completeness of collection
- minimisation of quality issues
- availability of results
- provision of additional insights

NEW ACD VEHICLE

NEW NSV

DUAL 128 BEAM LIDAR

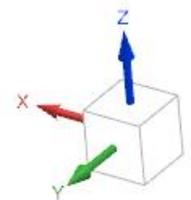

4/5G MOBILE INTERNET AND STARLINK (RURAL COVERAGE)

CARBON FIBRE 'HALO' ROOF POD, ADAPTABLE TO VARIOUS VEHICLES

XENOTRACK ROAD PAVEMENT CONDITION SENSOR

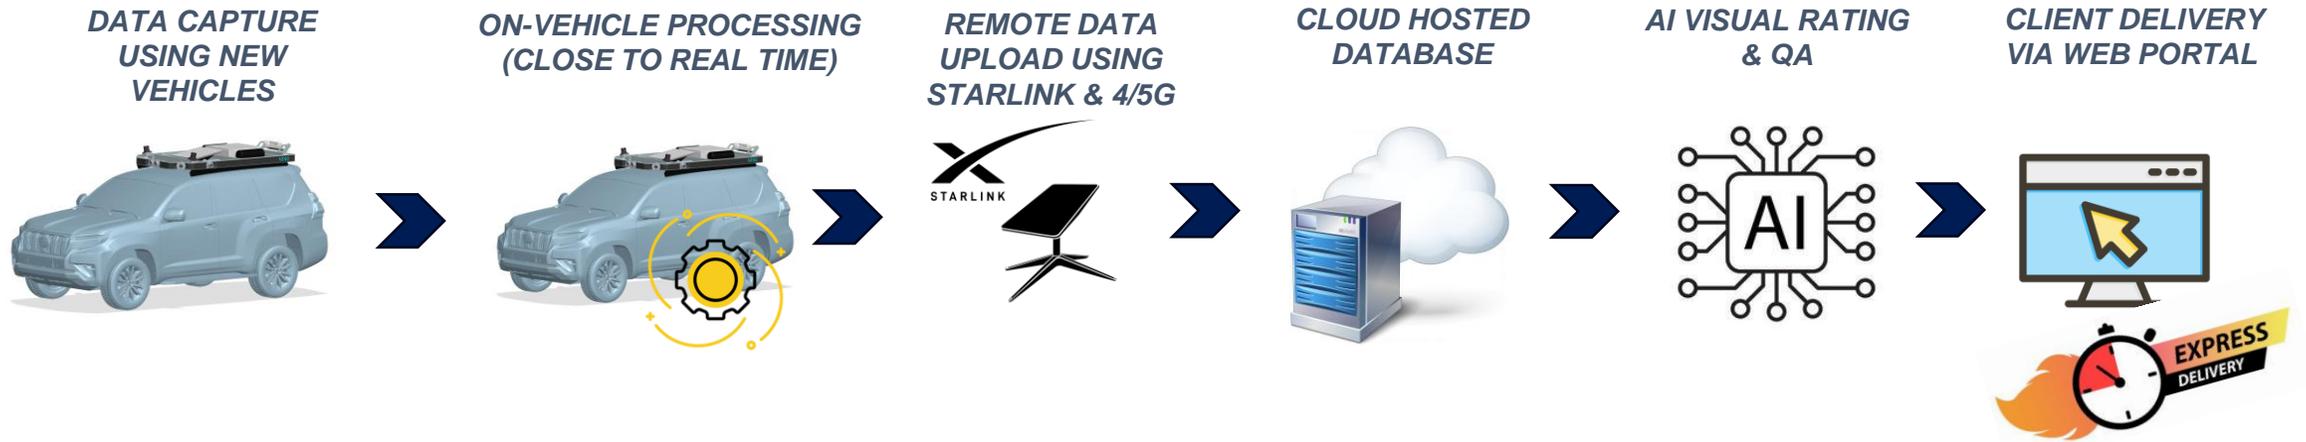

NEW 2023 TOYOTA PRADO 4X4

NSV

NTRO'S FUTURE-STATE DATA PROCESSING PIPELINE

48 HOURS FROM CAPTURE TO DELIVERY

- New vehicles come online early 2024.
- Configurable with different sensors and compute.

- Real time processing allows for real time error detection and correction.

- We're optimising the design of our database to be efficient for querying large datasets.
- We have 1 Petabyte of data in storage currently, and likely to generate another PB in the next 4 years.

- We have developed AI solutions for privacy. E.g. number plate and face blurring.

- Our portal allows the user to select a road and investigate road conditions and other data sources.

NTRO | iPAVE

Survey large networks in a fraction of the time, at a significantly reduced cost.

NTRO has developed the first fully integrated road surface and sub-surface condition assessment system, providing functional and structural data at traffic speeds.

Make an informed decision knowing what's happening above and below the surface of your road.

COVERAGE

80x faster than traditional methods such as FWD.

SPEED

Survey at 80 km/h, with typical outputs of 200-300km (20,000-30,000 tests) per day.

EFFICIENCY

Synchronised, collection of surface condition parameters, including cracking.

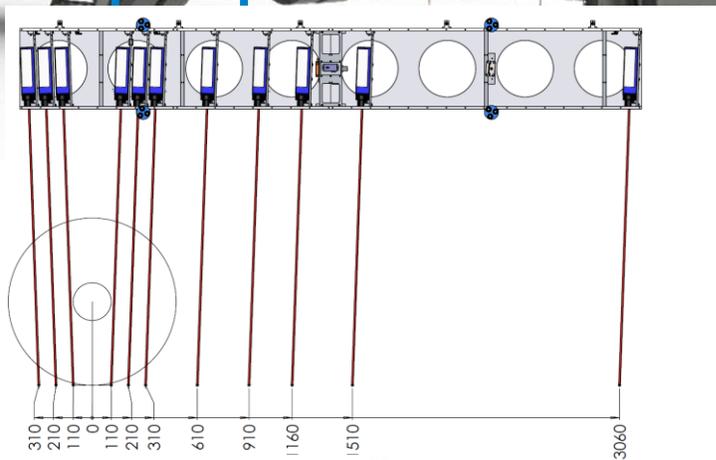

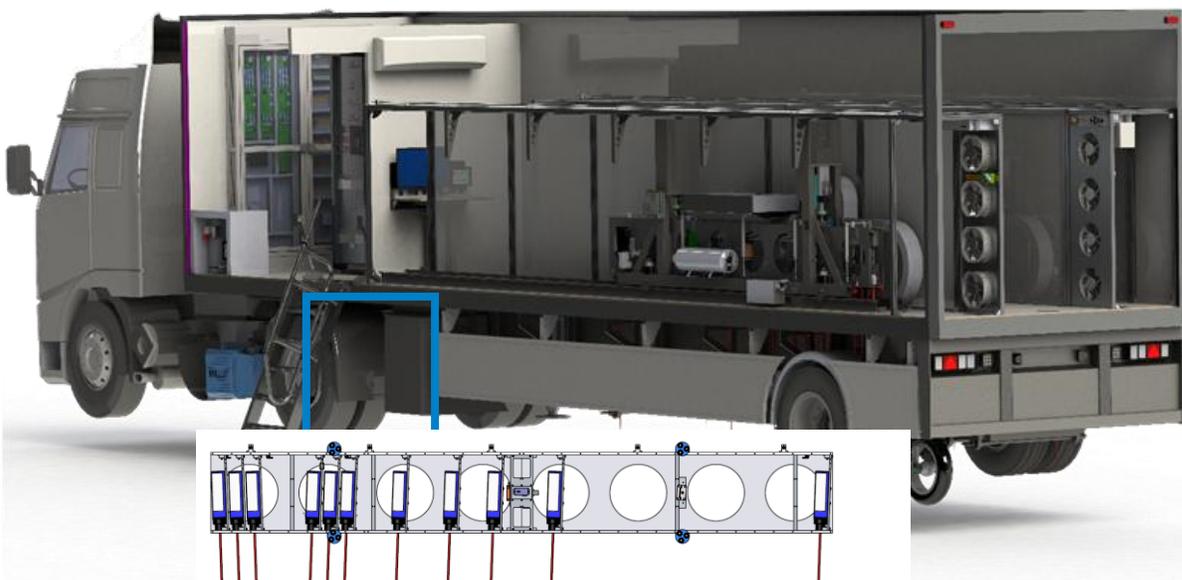

SAFETY

Minimal risk to general public and equipment operators.

Structural and functional data

iPAVE

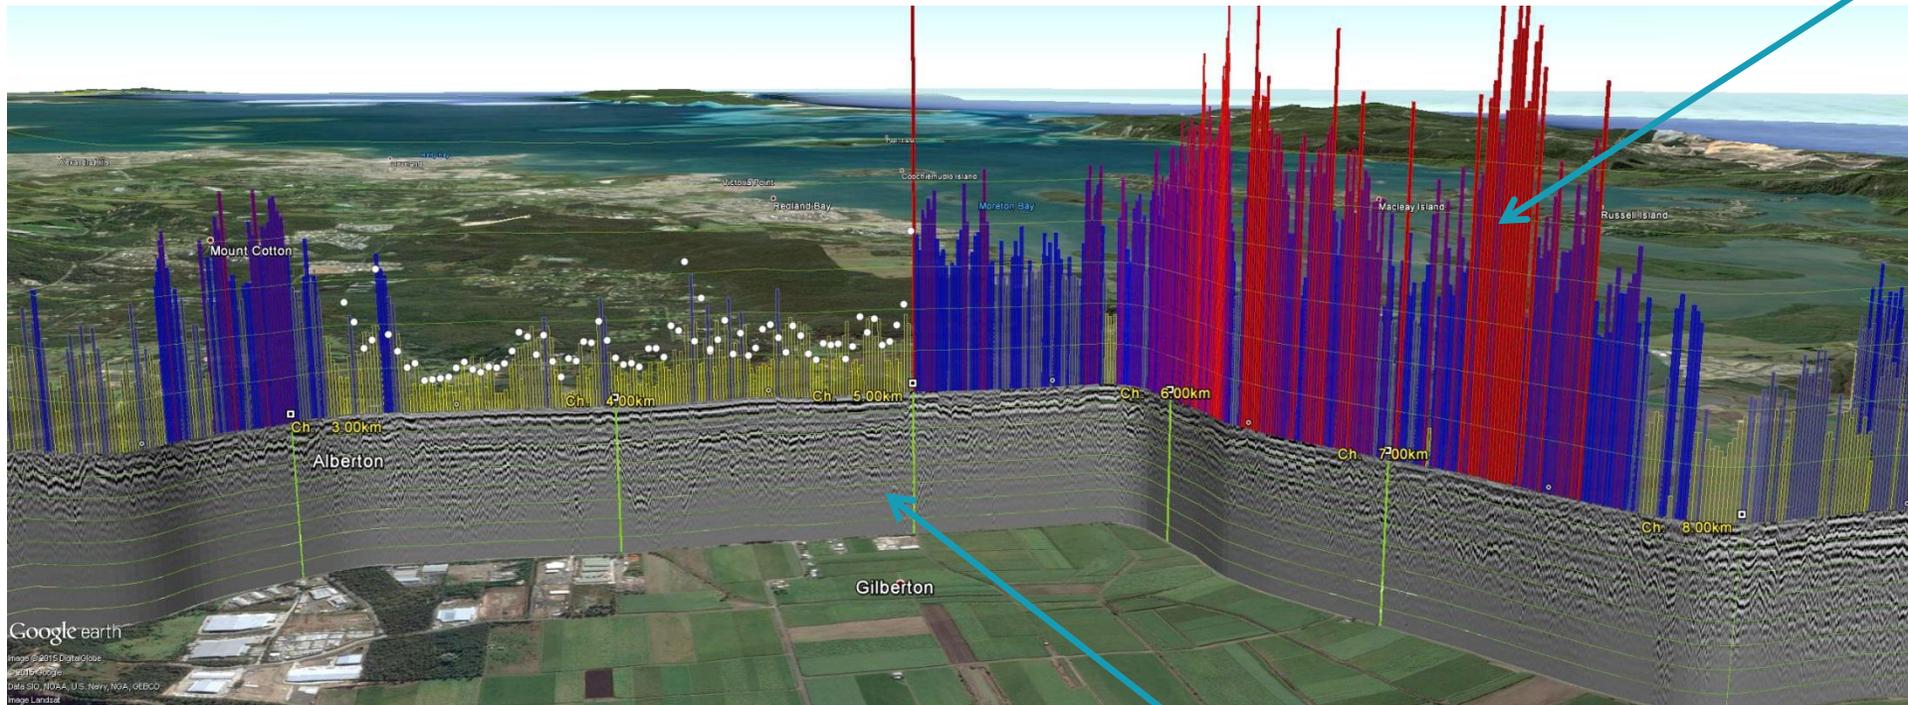

Doppler laser sensors: 11 250kHz Doppler sensors : deflection measurement

iPAVe3

Additional data stream for making informed decisions

DIGITAL DATA SETS : HOW THEY ARE UTILISED

Explore safety data with our interactive map and filters

State: NSW

LGA: All

Year: 2021, 2020, 2019, 2018, 2017

Crash Type: 6 options selected

Speed Zone: <=50, 60, 70-90, 100+, Not Specified

Severity: Property Damage Only, Minor Injury, Serious Injury, Fatal

Road Type: Access Road, Highway, Major Road, Minor Road

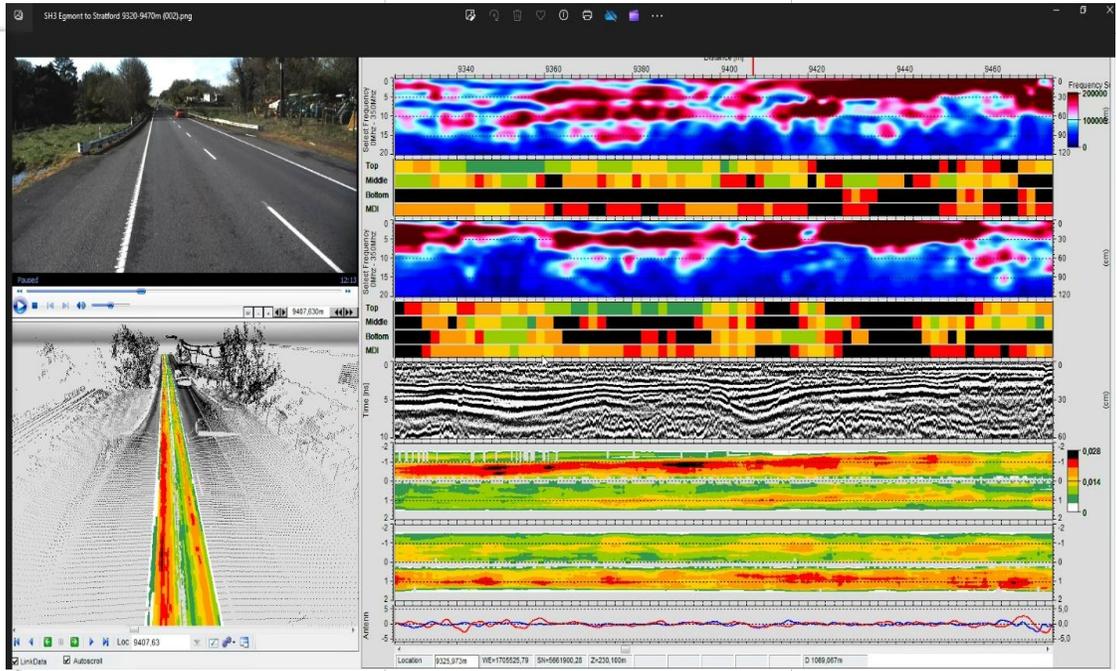

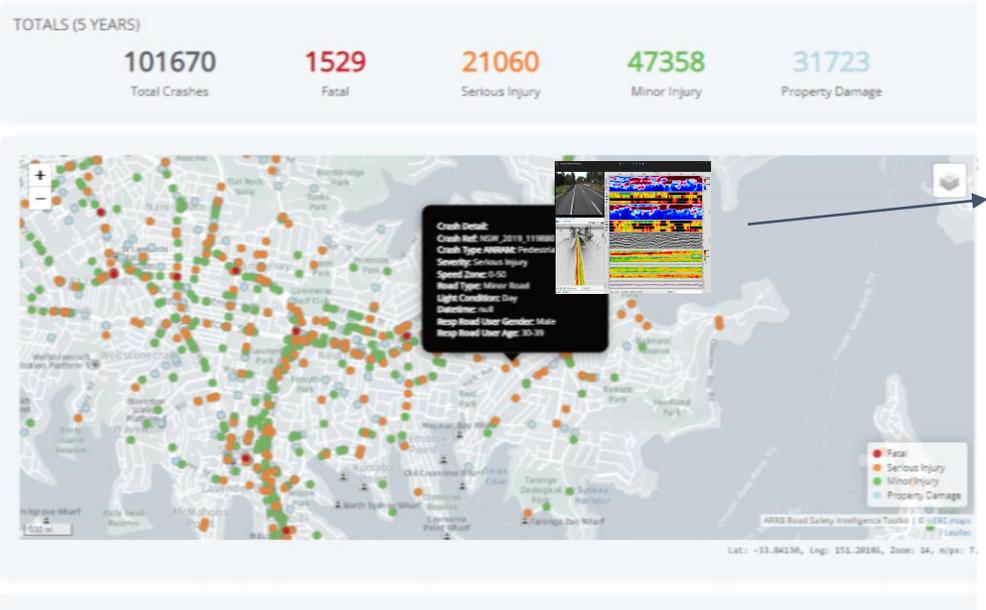

Contributing Factors:

Road User Age: 11 options selected

Road User Gender: Male, Female, Not Specified

Road User Involved: Not in these options

RESET FILTERS

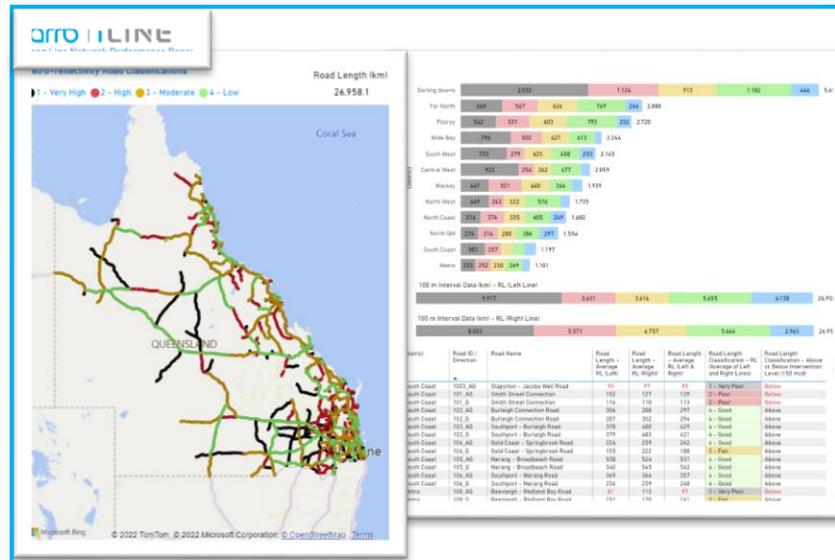

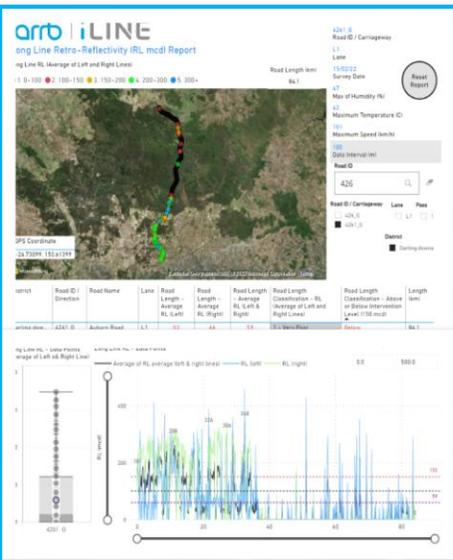

Realtime quality control and data validation.
 Ability to repeat capture on road that had a failure, within the same hour, vs. months later.
 Results available next day, not 3+ months.

- Structured dataset.
- Ingestion (overtime) of archive data (if feasible).
- Overlaying of multiple datasets (e.g. weather, crash data, traffic data).
- Scalable.
- Australian hosted.

- Client and internal application.
- Display of data stored in database.
- Download of client data.

Reflectivity

iLINE

Retroreflectivity

Edge and centreline in one pass the only unit in Australia capable of measuring more than one line concurrently

Friction Assessments
